SUBJECT: TEMPORARY EMISSIONS AT FLOW STATION 3

Dear Mr. Nye:

As we discussed during our conference telephone call on June 25, 1981 (Ray Nye - EPA; Mark Wagner - Sohio; Kevin Myers - ARCO) ARCO will be temporarily installing approximately 3600 horsepower of turbine capacity at Flow Station 3 as part of an early artificial lift project. The exact configuration of the turbine capacity has not yet been finalized.

These turbines are scheduled to be placed in service during the latter part of 1982. They will continue in operation until approximately mid-1984 when the previously permitted (PSD-X80-09) 36,000 horsepower artificial lift turbine is scheduled for start-up.

In that the temporary emissions are to be substituted for the already permitted permanent emissions, it is our understanding that no additional EPA permit or other paperwork beyond this notification will be required.

Sincerely,

Kevin C. Myers
